## What is DVD Creator

**DVD Creator** is a **DVD creating software** allows you to **create DVD from photos and video files**. It can convert photo files into DVD movies with fair-sounding background music and create nearly all the video files, such as avi, wmv, divx, xvid, mpeg RM, RMVB and Asf files etc, to DVD format. **DVD Creator** helps you not only to slide show your favorite photos on TV but also watch video files from your computer or on your TV.

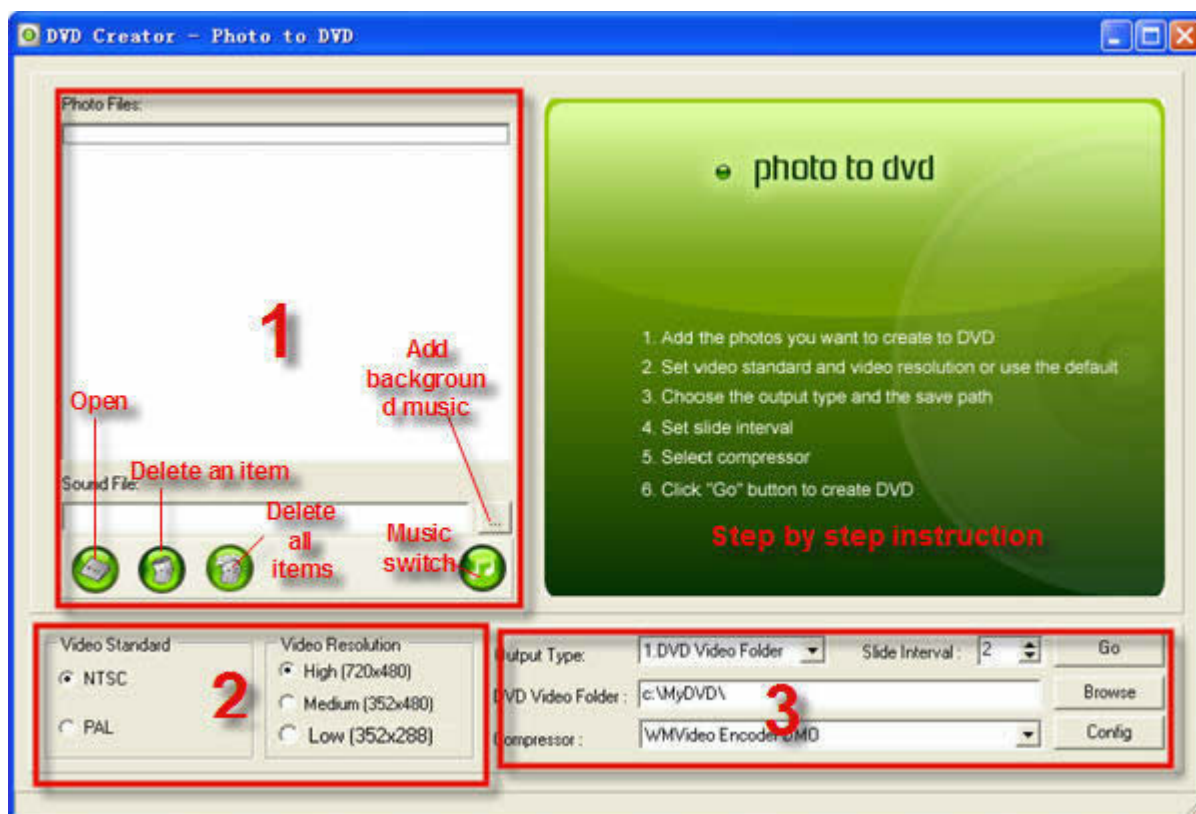

**DVD Creator** is a powerful but easy to use DVD tool for AVI / Xvid/ Mov/ Divx /Divx /Wmv /Asf to DVD **video converting and burning**. Wanna create your own digital home movies and photo slide shows? Wanna make your home a video studio? DVD-Creator allows the creation of a digital photo album stored on a DVD disc that can be viewed on any DVD player.

Open source files

Delete an item

Delete all items

Turn on the background music

Turn off the background music

**Video standard:**

**NTSC:**(National Television Systems Committee) is a standard format adopted by the FCC for television broadcasts in the United States, Japan, Canada and Mexico. This is commonly referred to as composite video because of the convergence of luminance and color into a single analog signal. NTSC delivers 525 lines of resolution at 30 frames per second.

**PAL:** (Phase Alternation Line) It is the standard format for television broadcasts in Australia, most Western

European, South American and Asian countries. PAL delivers 625 lines of resolution at 25 frames per second.

**Video resolution:**

High: best video quality

Medium: good video quality

Low: OK video quality

**Output type:**

DVD Video file: stores dvd video files (VIDEO\_TS,\*.vob, \*.ifo, \*.bup) before burning them on a disc

Disc Image file: stores \*.iso which can both directly play on computer and burn to a disc

DVD Disc: directly burn source files to DVD Disc

**Slide interval:** interval between photos
